Aesthetic and Reconstructive Dentistry*

June 5, 2013

Dear Friends,

Many of our patients have asked us questions about the “teeth in a day” advertisements seen on television, in newspapers and magazines. These questions make clear the advertisements are confusing and misleading.

The initial teeth that are placed during a “teeth in a day” appointment are provisional or temporary that require 2 or 3 prior appointments to gather necessary records and fabricate. Only after two - four months can the final bridgework teeth be created and inserted.

In our office we provide “teeth in a day”. However, this treatment is not for everyone, a fact the “teeth in a day” advertisements do not acknowledge. There are many factors that must be considered and several appointments necessary before the actual insertion of the bridgework / teeth.

As Specialists in Prosthodontics, the only specialty in the restoration and replacement of teeth, we have been on the forefront of dental implant therapy since contemporary dental implant therapy came to North America in 1982. We are very experienced and knowledgeable about these procedures including which patients are suitable candidates for these services.

If you or a friend or a loved one thinks they might benefit from this service, please do not hesitate to call us for a consultation.

Sincerely,  

M. P. Pedlar, B.Sc., D.D.S., M.S.D., FRCD (C), Certified Prosthodontist  
MPP/ds

Dr. M.P. Pedlar Dentistry Professional Corporation
